

## Product Specifications

**Product Name:** Be used foaming of PVC pro-environment stabilizers

**Product Aspect:** white or yellowish powder

**Product Model:** RT-800A1

### Product Features:

- 1、 The pro-environment stabilizers choose heterocyclic organic compounds as core materials. It own high heat resistance and good weathering performance, to ensure that the product has good initial color and long-term stability and excellent resistance to weathering.
- 2、 The pro-environment stabilizers can be used with lead and organic tin but without any cross contamination
- 3、 The pro-environment stabilizers own high efficiency and low price.
- 4、 The pro-environment stabilizers own a good processing performance and fast processing speed, making products with bright surface

### Product Usage:

The pro-environment stabilizers are used for PVC foam board and other foam type extruded products. According to the product specifications and machine condition should be appropriately regulated lubricant, suggesting to add external lubricant properly and use less sliding agent.

**Dosage:** The pro-environment stabilizers use volume from 4.0 to 5.0 per 100 PVC

### Standard:

According to the third party international specification, the product conforms EN71-3, RoHS, PAHs(18 items), Phthalates(21 kinds), PFOS/PFOA, NP, BPA, REACH-SVHC.

### Product Storing:

Advice to put the product in dry and draft chamber. Please using up asap once package opened

**Product Packaging:** 25Kg/Package
